

CookBook App

Team members: Buna Cezar, Agoston-Eduard Alexandru

GENERAL DESCRIPTION:

This application aims to help its users discover new and delicious recipes posted by other users, as well as sharing their own.

REGISTRATION(for both Customer and Admin):

The user needs to register into the application by selecting one of the 2 roles: client or admin. Both roles require a username, password and(optionally) more info, such as their phone number, email, job and a brief description of themselves. However, the admin role is required to also type in his admin id.

FOR CLIENTS:

Clients(or normal users) have 2 options: using the app as a logged user or as a non-Logged user.

A non-logged client can view all the recipes posted by other people, but he cannot vote them(like or dislike), comment on them or make his own recipe post.

A logged user has the ability to create his own posts, as well as all the other things a non-logged user can't do.

FOR ADMINS:

After logging in, an admin can do all the things a logged client can do, as well as a list of posts that have a really bad like to dislike ratio or many negative comments, which he has to review. After reviewing the bad rated recipe, he can choose to remove it if he sees fit.

The recipes(or the posts) will be displayed in 2 ways:

- sorted by category, which the user can select
- not sorted

In both cases, the recipes will be displayed chronologically,ordered by the time of Upload(similar to social media,such as Instagram or TikTok).

Thank you for reading! 😊
